

**Viano organic based fertilisers ...
the right choice for an improved harvest quality in strawberries and small fruit crops ...**

**Improved soil conditions
before planting
and better root development
in small fruits
and strawberry crops with
VIANO MIXPROF FERTISOIL!**

Viano MixProf Fertisoil is a high quality organic based soil improver, which contains also Trichoderma and useful bacteria. It is indispensable to make the soil 'rich' and 'vivid'. Before planting strawberry or small fruits we recommend to mix Viano MixProf Fertisoil in the soil at 100-200 g/m². It optimizes the water-air balance in the soil. Thanks to the presence of Trichoderma, this product will neutralize organisms which are harmful to strawberries in the soil.

Viano MixProf Fertisoil guarantees a faster 'establishment' and a better root development which will result in stronger and healthier strawberries and small fruit plants, better build and heavier fruits.

DOSE (RECOMMENDED) : 10-20kg/100m²

AVAILABLE : 25 kg bags

PALET : 36x25 kg (900 kg)

Viano organic based fertilisers ... the right choice for an improved harvest quality in strawberries and small fruit crops...

**Top quality fruit,
stronger and longer
preservation after
harvesting with
VIANO ORGANIC fertilisers!**

To much Nitrogen will lead to excessive foliar development in strawberry crops, which results in a lower fructification. The level of acidity (pH) in the soil is very important and must be in between 5-6 for the good development of strawberry and small fruits. Attention is to be given to the dosage of K, P and Mg. The fertilisation with K fertilisers can be proceed from the second week after flowerformation.

The fertilisation is best implemented as follows :

- a base fertilisation with **Viano MixProf Fertisoil** or **Viano MixProf Bio 5 (4-3-3)**.
- a maintenance fertilisation with N-dosage from 1 month after planting (1-2 kg/100m²)
- a K- fertilisation some weeks after flower induction (2-3kg/100m²)

The content of nutrients is depending on the soil type, the soil condition and differs from plot to plot.

The fertilisation of strawberries and small fruits is a delicate process... Potash is of big importance to enhance the fructification, the strenght and the flavour of the berries. For that reason it is recommended to use **Viano MixProf Bio 2 (6-5-10(+4))** or **Viano MixProf Bio 4 (3-6-12(+3))** as maintenance fertilisation.
